wiiw, Rahlgasse 3, 1060 Vienna

International Value-Added Linkages in Development Accounting

Alejandro Cuñat (University of Vienna and CESifo)

The presentation is based on a paper co-authored with Robert Zymek (University of Edinburgh and CESifo).

Abstract

We generalise the traditional development-accounting framework to an open-economy setting. In addition to factor endowments and productivity, relative factor costs emerge as a source of real-income variation across countries. These are determined by bilateral trade frictions (which underpin the patterns of "international value-added linkages") and the global distribution of factor endowments and final expenditures. We use information on endowments, trade balances and value-added trade to back out the relative factor costs of 40 major economies in a theory-consistent manner. This reduces the variation in "residual" TFP required to explain the observed per-capita income differences by more than one half.

JEL Codes: E01, F15, F40, F62, F63.

Keywords: world input-output, development accounting, transfer effect.

We kindly ask you to [register](#) for the event. Participation is free of charge.

This seminar series is an activity of the Research Centre International Economics FIW, which is a project of WIFO, wiiw and WSR on behalf of the Federal Ministry for Digital, Business and Enterprise (BMDW). The FIW cooperation with the Vienna University of Economics and Business, the University Vienna, the Johannes Kepler University Linz and the University of Innsbruck is supported by the Federal Ministry of Education, Science and Research (BMBWF).

The seminar programme is regularly updated. Please visit the [wiiw](#) or [FIW website](#) for the current version of the programme. Papers and presentation slides, as far as available, are posted on our [webpage](#) after the respective seminars.
